Preventive Services

Medicare covers many preventive services to keep your patients healthy. Preventive services can help find health problems early, when treatment works best, and can help keep your patients from getting certain diseases. Talk to your patients about which preventive services are right for them and how often they need them.

If you're a person with Medicare, [learn about all preventive services](#).

This content is for health care providers. If you're a person with Medicare, learn more about [flu shots](#).

Consider giving a preferred vaccine to your patients 65 and older. Preferred vaccines are potentially more effective than standard dose flu vaccines. There are 3 recommended vaccines:

1. [Fluzone High-Dose Quadrivalent vaccine](#)
2. [Flublok Quadrivalent recombinant flu vaccine](#)
3. [Fluad Quadrivalent adjuvanted flu vaccine](#)

If one of these recommended vaccines isn't available, give your patients a standard-dose flu vaccine instead.
