EDI and How it Works

EDI is an electronic communication method that enables fast, accurate and reliable exchange of data between the computer systems of organizations that do business together by using the same standardized message formatting, without the need for human intervention.

Our providers communicate with NGS using one of our approved NSVs through SETP Gateway for all approved transactions or directly through our Internet Gateway for the 276/277 and 835 transactions.

To enroll access EDI Enrollment section under Claims & Appeals.

Additional information on various EDI Solutions can be accessed on the left hand menu.
