

National Government Services Medicare Part B 2024 Preventive Services Virtual Conference

What does Preventive Services mean for Medicare Beneficiaries?

Medicare offers many preventive service benefits that can help detect health problems early and keep your patients from getting certain diseases. Preventive services include exams, shots, lab tests, and screenings. They also include programs for health monitoring, counseling and education to help patients take care of their own health.

Our National Government Services Provider Outreach and Education (POE) Team is hosting Medicare Part B 2024 Preventive Services Virtual Conference on Monday 12/9/2024 through Wednesday 12/11/2024.

Each webinar will begin with a presentation, and then we'll address your questions. We hope you'll join us for an opportunity to learn about the valuable services available for your Medicare patients and learn how you can help them take advantage of these services.

Registration for these free sessions is available on our website, NGSMedicare.com, under the [Events](#) tab, or you may register below. All webinars are held in eastern time (ET). You may register for as many as you'd like. Simply click on the title below and register today!
